

IT3030 (PAF) – Tutorial 2

You may refer to any resource available online/offline.

Discussions are encouraged as long as they are on topic.

1. Why is Version Controlling needed?
2. “It is necessary to use a Version Controlling System when collaborating with others”. Give your reasons for/ against this statement. Justify your answer.
3. Git does not strictly need a Centralized Repository to function. It can very well function in a distributed manner. However, in practice users of Git repositories tend to nominate one repository as a central repository (called the *upstream* or the *Remote repository*) and use it as a single source for updates. Explain why.

Hint: You may refer this link (https://en.wikipedia.org/wiki/Distributed_version_control).
